

"At King's Oak Academy all students are Geographers".

Lower school curriculum

Our curriculum develops students' understanding of the natural world, including continents, countries, oceans, climates, mountains and rivers. They will also study the relationship between humans and the natural world, looking at settlements, human responses to the natural world, including construction, demographics, and immigration. Children will be introduced to the knowledge and skills of the geographer and be given the opportunity to practise those skills using a range of equipment and resources. Subject specific vocabulary is essential for developing understanding and acquiring the voice of the geographer.

As children progress through the school, resources and practical activities, including the use of compasses, globes, maps, keys will help solidify classroom learning. Children will be given the opportunity to use and create geographical resources of their own. Children will acquire the ability to compare and contrast geographical places and locations and to make reasoned and evidence-based judgements about differences and similarities. The curriculum aims to inform children about the world they inhabit so that they can make sense of what they see around them.

Students at King's Oak Academy are geographers. Therefore, they should know what a geographer knows, see how a geographer sees and try to look at the world, as a geographer does. To study places and the relationships between people and their environments to make sense of the world and my place in it. As geographers, the students explore both the physical properties of Earth's surface and the human societies that spread across it. They examine how human culture interacts with the natural environment and the way that location and places can have an impact on people. As geographers, they seek to understand where things are found, why they are there, and how they develop and change over time.

In Lower School, the students are introduced to the concepts of place, space, scale environmental change (because of human and physical processes), environmental impact and sustainability, interconnection and cultural awareness and diversity. These concepts are studied at a local, national and global level, so that students understand their place in the world. Students will, therefore, learn about places, processes, the human and physical geography of the UK. They will build on these ideas and concepts through a different lens, when completing contrasting studies to understand the geography of the Mediterranean and South America.

Course overview

Year	Term 1	Term 2	Term 3	Term 4	Term 5	Term 6	
Year 1 Global: UK: Locational investigations & patterns		Seasons	Seasons				
	Concepts Space		Concepts				
	Scale		Physical	l Processes			

	Knowledge		Knowledge				
	identify characteristics ofIdentify characteristics ofphysical and human e.g.	(London, Cardiff, Edinburgh, Belfast) four countries capital cities (famous landmarks both Thames River and Palace of Westminster) seas (Atlantic Ocean, North Sea, Irish	 Identify seasonal and daily weather patterns in the United Kingdom. Recognise the importance of the sun as a source of light and warmth. Understand daily weather changes. Temperature: thermometers are used to measure temperature Clouds: rainfall comes from clouds. Rainfall: how the condition of the ground varies with rainfall; rainbows. Thunderstorms: lightning, thunder, hail, safety during thunderstorms Snow: snowflakes, blizzards. 				
2	Global: Locational investigations & patterns	Global: Locational investigations & patterns	Contrasting study: local study (South- West England) and non-European area	Changing Environments (Recommendation: Local or regional studies)			
	Concepts: Place Knowledge and skills: Know the location of the school and home within UK region (South-west). Know the regions of the UK (North-east, North-west, Yorkshire & Humber, East Midlands, West Midlands, East Anglia, London, Southeast, South-west). Know major waterways in the region (South-west: Avon, Severn Estuary). Concepts: Place Space Knowledge and skills: Know the world's seven continents Know the world's five oceans Location of hot and cold areas of the world in relation to the Equator and the North and South Poles		Concepts: Environments change because of human influences or physical processes. Knowledge and skills: Understand geographical similarities and differences through studying the human and physical geography. Use basic geographical vocabulary to refer to seasons and daily weather patterns. Understand the difference between weather and climate. Concepts: Environmental impact a Sustainability Knowledge and skills Environmental change a Habitat destruction Environments are constance changing, and this can sometimes pose danger specific habitats, for example of the pollution and development; deforestate pollution, litter.				
3	UK: Locational investigations & p	atterns	Contrasting study: England and the Mediterranean Concepts:				

Concepts: Physical environments Environments change as a result of human influences or physical Place processes. Knowledge and skills: Know that we live in the South-west of England, and I can find it on a Knowledge and skills Know location of Mediterranean countries (France, Italy, Greece, Spain) map. It is made up of counties and I can name the county I live in and those surrounding me. I can name the significant cities that are in my Identify the country/countries' location in relation to the globe: hemisphere region. I can identify human and physical landmarks in the South-(northern), latitude, longitude and time zones in relation to Greenwich Mean Time (GMT). west. Know geographical similarities and differences through the study of physical Know the counties of own region (South-west: Bristol, Somerset, North Somerset, South Gloucestershire, Gloucestershire, Devon, geography: Dorset, Cornwall, Wiltshire) Know significant cities within own region (South-west: Bristol, Exeter, Bath) Identify features of the region (famous landmarks both physical and human e.g. Cheddar Gorge, Somerset Levels, Avon Gorge, Clifton Suspension Bridge, Stonehenge, Bath Royal Crescent, Eden Project) UK: Locational investigations & patterns Contrasting study: England and a region in South America (Peru/ Brazil) Concepts: Concepts: Place Environment - human Knowledge and skills: Interconnections **Cultural Awareness and Diversity** Know the counties of region (South-east & London: Kent, Knowledge and skills: Berkshire, Surrey, West Sussex, East Sussex, Essex, Buckinghamshire, Hampshire, Oxfordshire, Herefordshire) Know location of Peru/ Brazil and surrounding countries (Ecuador, Chile, Case study of a city within South-east: London Bolivia, Colombia) Know significant cities in England (London, Bristol, Manchester, Identify the country/countries location in relation to the globe: Birmingham, Liverpool, Leeds, Sheffield, Newcastle). hemisphere (northern), latitude, longitude and time zones in relation to Identify characteristics of the England (famous landmarks both Greenwich Mean Time (GMT). physical and human e.g. Dover Cliffs, River Thames, Peak District, Know geographical similarities and differences through the study of Dover Cliffs, Blackpool Tower, Windsor Castle, Lake District, Angel physical geography: of the North, Hadrian's Wall) Identify the hemisphere (northern), latitude, longitude and time zones in relation to Greenwich Mean Time (GMT).

In Geography, students learn about the world that they live in and their place in it. Students begin by exploring their localities, before discovering other diverse environments in their region/country/world. Students will be able to identify physical properties of the earth, such as coasts and rivers, whilst also having an awareness of the human societies and cultures that inhabit it. Fieldwork is crucial to allow students the freedom to be geographers and to immerse themselves fully in the subject. Geography allows students to understand the environment they live in, explore their place in it, and adapt to an ever-changing world. Students should be able to understand the impact of human activity on the world and to understand that human are the "Gardeners of the world" and that we have a responsibility to promote sustainability.

The students will deepen upon their understanding of the different conceptual focuses in geography by continuing to form their ideas of space and place that were established in KS2. At the start of Year 7 students will be able to use local and regional OS maps to understand human and physical features in and around Bristol. Furthermore, in Year 5, students were able to understand scale when studying "Local investigations and patterns", they will be able to think about 'How does place connect to other places?' This will build on their understanding of local places in Bristol and the UK and places further afield like the Mediterranean and South America. The students will continue to tackle environmental issues when studying Russia in Year 7, students will explain, and human activities have an impact on different biomes. As well as look at human processes and their impacts, students will look at the power of the Earth and understand the physical processes that occur in the natural world. Glacial processes in Year 7, will build on their understanding of the water cycle and river processes in Year 5. Importantly, students will still look at human geography and continue to learn about cultural awareness and diversity, when studying both Asia and Africa in Year 8. Students will build on their knowledge of these two great continents to challenges misconceptions and learn about the diversity of development in these regions.

	Southern Highlands) and locally. Understand contour lines on a variety of	maps.			our world (e climate char Students car on humanity different pla Children und how it is affe ways in whice	nvironment and wildlife) through
7	Where do I live in the UK and the world?	Why is the U in the UK?	K a unique environment	How do rivers change the of the UK?	landscape	Is the geography of Russia a curse or a benefit?

	Key concepts: Place and Space Scale Knowledge and skills: To describe where they live in the world using different scales. Describe the physical and human landscapes of a place.	Physical and human processes: glaciation; tourism, industry and agriculture. Place and Space: unique places within the UK – National Parks Knowledge and skills: Describe the location and importance of the Lake District. Describe the physical and human landscapes of the Lake District.	 Key concepts: Physical and human process: river processes and formations, flooding and environmental impacts. Knowledge and skills: Describe how water travels round in a system to create river environments. Describe how a river changes from source to mouth. Describe how floods impact on our lives. 	Key concepts: Place and Space: unique locations within Russia. Interdependence: links between human and physical features of a country. Environmental impacts: how human activity causes impacts. Knowledge and skills: To describe the location and geographical features of Russia. Describe and explain the variety of climate types in Russia. To assess the importance of different environments in Russia. Explain and describe how plants and animals adapt to the Russian tundra climate. To understand how the size of Russia provides opportunities and challenges for the population and the economy.
8	Is everything that we know about Africa wrong? Key concepts: Cultural awareness and diversity Place and Space Sustainable development Knowledge and skills:	Are Africa's landscapes more than just 'The Lion King'? Key concepts: Place and Space Physical and human processes Sustainable development - Knowledge and skills:	Will Asia ever be on top? Key concepts: Place and Space Cultural awareness and diversity Interdependence Environmental impacts Knowledge and skills: Give a definition of a NEE.	Why do so many people live in the danger zone? Key concepts: Physical and Human Processes Development affecting the impact of natural disasters. Interdependence Knowledge and skills: Plate tectonics, convection theory

Locate a variety of countries within Africa.

Identify and breakdown common misconceptions of Africa.

Understand the role of past has played in the development levels in Africa.

Know Africa is a developing continent, with a range of countries at different stages of development.

Know the term development and the development continuum – LIC's/NEE's/HIC's.

Students will know how development can be measured using development indicators. Social (life expectancy, literacy rate, birth rate, deathrate)

Interpret and describe the climate of each location using climate graphs

Understand the concept of high and low air pressure

Describe and explain the global atmospheric circulation model and how this influences climate at the equator and tropics – rainforest and desert biome

Describe the characteristics of the plants and animal of the Savanna Biome and how people use the Savanna biome

Use a choropleth map to describe the distribution of wealth in Asia.

Describe the distribution of HICs, LICs and NEEs using a choropleth map.

Give examples of development indicators including GNI, HDI, literacy rates and life expectancy.

Compare China's level of development with that of the UK and a LIC using development indicators including GNI per capita, HDI, Life expectancy, years in education.

Explain why China is a NEE using development indicator above.

Give examples of primary, secondary and tertiary, quaternary industries (jobs).

Give the main causes of rapid development in China – industrialisation – economic zones – manufacturing (TNCs).

Plate boundaries – Constructive, destructive, and conservative

Formation of volcanoes – composite and shield

Hazards of volcanoes, gas clouds, lahars, pyroclastic flows

Using maps to identify areas at risk from natural hazards

Know how the level of development can influence the effects (both primary and secondary) and responses (immediate and long term) to natural hazards using case studies of different levels of development

An example of a volcanic eruption in Asia – Indonesia (NEE)

Responses in HICs v LICS – including both immediate and long term – Planning (evacuation), protection (earthquake resistant buildings) and prediction (challenges associated with predicting earthquakes, accuracy of predicting volcanoes.

Know why people continue to live in hazardous areas

Upper school curriculum

The Year 9 curriculum offers students the opportunity to put their knowledge, skills, understanding to the test before choosing their options. The Year 9 course starts with the enquiry "What can we do about climate change?" An enquiry that analyses the causes, impacts and responses (both adaptation and mitigation) to climate change. This builds upon the students understanding in KS2. Students will understand that the threat of climate change is local and global, affecting the coasts of the UK, and increasing the frequency and severity of tropical storms in the tropics. An important conceptual focus in Year 9 is sustainable development, this is covered when answering the enquiry "How

long can we exploit Earth's resources?" The students will evaluate the pros and cons of renewable and non-renewable energy sources; the risk of ecological overshoot and the impact that humans have on the globe (World footprint). This means that they would have a good understanding of resource management before tackling the AQA topic "The challenge of resource management".

Link to exam spec:

The specification enables a variety of teaching and learning approaches. This exciting and relevant course studies geography in a balanced framework of physical and human themes and investigates the link between them. Students will travel the world from their classroom, exploring case studies in the United Kingdom (UK), higher income countries (HICs), newly emerging economies (NEEs) and lower income countries (LICs). Topics of study include climate change, poverty, deprivation, global shifts in economic power and the challenge of sustainable resource use. Students are also encouraged to understand their role in society, by considering different viewpoints, values and attitudes. Upon completion of this two year course, students will have the skills and experience to progress onto A-level and beyond.

The subject content is split into four units:

- 3.1 Living with the physical environment
- 3.2 Challenges in the human environment
- 3.3 Geographical applications
- 3.4 Geographical skills.

In units 3.1 and 3.2 the content is split into sections, with each section focusing on a particular geographical theme. Unit 3.3 sets out the requirements for fieldwork and issue evaluation. Unit 3.4 sets out the geographical skills that students are required to develop and demonstrate. In the specification content, students are required to study case studies and examples. Case

studies are broader in context and require greater breadth and depth of knowledge and understanding. Examples are more focused on a specific event or situation, are smaller in scale and do not cover the same degree of content.

10	Urban Issues and Challenges		The	E Living World			Coastal lands	scapes in the UK
	Understand that: A growing percentage of the world's population lives in urban areas. Urban growth creates opportunities and challenges for cities in LICs and NEEs. Urban change in cities in the UK leads to a variety of social, economic and environmental opportunities and challenges. Urban sustainability requires management of resources and transport.		Understand that: Ecosystems exist at a range of scales and involve the interaction between biotic and abiotic components. Tropical rainforest ecosystems have a range of distinctive characteristics. Hot desert ecosystems have a range of distinctive characteristics. Development of hot desert environments creates opportunities and challenges. Areas on the fringe of hot deserts are at risk of desertification.		Understand that: The UK has a range of diverse landscapes. The coast is shaped by a number of physical processes. Distinctive coastal landforms are the result of rock type, structure and physical processes. Different management strategies can be used to protect coastlines from the effects of physical processes. The shape of river valleys changes as rivers flow downstream. Distinctive fluvial landforms result from different physical processes.			
11	Natural hazards pose major risk people and property. Earthquakes and volcanic erupt are the result of physical proces. The effects of, and responses to tectonic hazard vary between a of contrasting levels of wealth. Management can reduce the efform of a tectonic hazard.
